> SCAN 4 & 5

The design with a lower basket makes it significantly easier to lift the crates out of the trolley. With the compact format of the trolley, you have a trolley that is optimum to steer, but very spacious at the same time. The trolley is equipped with a separate basket with a child seat in anthracite. This involves all the crates being able to be used in an efficient manner without the space in the basket being blocked by the child.

If no child is sitting in the basket, then it functions as an extra basket, perfect for when you are scanning fruit and vegetables or as a place to put goods that you are extra protective about.

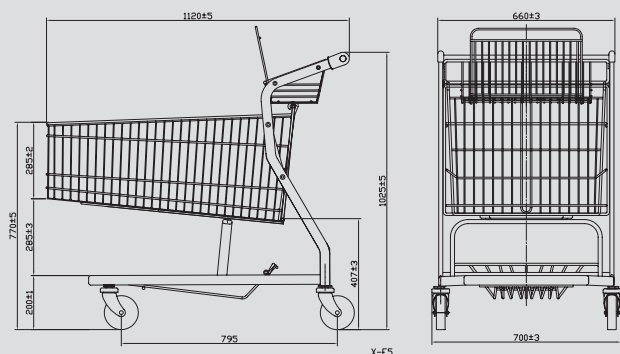

Delivered bright zinc plated, with an Ovaly handle, and with transparent plastic moulding to protect the basket edge against oxidation and corner protection in grey anthracite in order to protect the interior equipment.

A number of accessories are available such as another colour for plastic details and handles, Euroloc shopping trolley lock, safety belt for children, Trolleymatic handle, different RelaXT handles, with holder for scanner and coffee mug.
